SEPM ASSIGNMENT-2

Q) Define a project & project management. Explain characteristics of project management.

→ A project is a temporary activity undertaken to create a unique product, service or result. A project has a specific goal & to defined start and end time & limited resources such as time, money and manpower. Examples include developing software, constructing and building and implementing a new banking system.

A project management is the process of planning, organizing, directing and controlling resources to achieve specific project goals within a defined time & budget. It involves managing tasks, people, requirements and communication to ensure successful completion of the project.

Characteristics:-

- ① Specific Objective: Every project has a clearly defined goal or purpose.
- ② Temporary Nature: A project has fixed start & finish time.
- ③ Unique Outcome: Each project produces a unique product or service.
- ④ Limited resources: Project use limited resources such as time, budget & manpower.

- ⑤ Risk & Uncertainty: Projects involve risk that must be managed properly.
- ⑥ Interrelated Activities: A project consist of multiple tasks that depend on each other.
- ⑦ Teamwork: Project require collaboration among different team members
- ⑧ Planning & control: Proper planning & monitoring is essential for project success

22)

⇒ **PMBOK** stands for Project Management Body of Knowledge. It is a guide developed by Project Management Institute that provides standard practices & guidelines for project management.

Key features of PMBOK:

- Provides standard Project Management terminology
- Defines Project Management Processes and Knowledge area.
- Helps in planning, executing and controlling projects
- Improves efficiency and project success rate.
- Used globally as professional guidance

Q3) Explain ITPM

⇒ ITPM (Information Technology Project Management) refers to the management of projects related to the information technology system such as software development, network installation or database implementation.

ITPM focuses on applying project management techniques to IT-related projects to ensure successful development and implementation of technology solution.

Main components of ITPM

- ① Project planning: Defining project scope, schedule & resources
- ② Project Execution: Developing software or implementing IT systems
- ③ Project Monitoring: Tracking progress & maintaining risks
- ④ Project Control: Making adjustments to ensure the project stays on schedule
- ⑤ Project closure: Completing the projects and delivering the final product.

Q) Role of RFP its content & purpose

⇒ **RFP (Request for Proposal)** is a document issued by an organization, to invite vendors and suppliers to submit proposals for providing a product or a service. It is commonly used when organizations want external companies to participate in project development.

The main role of RFP is to help organizations select vendors by comparing different proposals.

Content of RFP:

- ① **Project Overview:** Description of the project & its objectives.
- ② **Scope of Work:** Detailed task and responsibilities.
- ③ **Technical Requirements:** System or technology requirements.
- ④ **Timeline:** Project schedule & deadlines.
- ⑤ **Evaluation criteria:** Factors used to select the best proposal.
- ⑥ **Submission guidelines:** Instructions for vendors to submit proposals.

Purpose:

- To invite proposals from multiple vendors.
- To ensure fair competition.
- Obtain best quality solution.
- Select the most suitable vendors for the project.

Q) Feasibility study, its types, content & purpose

⇒ A feasibility study is an analysis conducted before starting a project to determine whether the project is practical & achievable.

It evaluates the technical, economic & operational aspects of the project.

Types of Feasibility study:

- ① Technical Feasibility: Determines whether required technology & resources are available.
- ② Economic Feasibility: Evaluates whether the project is financially viable.
- ③ Operational Feasibility: Checks whether the system will work efficiently in the organization.
- ④ Schedule Feasibility: Determines whether the project can be completed within the required time.

Contents:

- Project description
- Current system analysis
- Proposed system overview
- Cost-benefit analysis.
- Technical requirements
- Risk analysis

Purpose

- ~~Proj~~ Determine project viability
- Identify potential risks
- Evaluate cost & benefits
- Support decision making before project development.

Q) Short note on WBS

⇒ WBS (Work Breakdown Structure) is a project management tool used to divide a project into smaller & manageable tasks. It helps project managers organize work in a structured way.

In WBS, the entire project is broken down into smaller activities called work packages, which can be easily planned & managed.

Advantages of WBS

- Improves project planning
- Makes task management easier.
- Helps assign ~~resp~~ responsibilities to team members
- Improves cost & time estimation
- Helps monitor project progress

⑥ Maintenance

- System support
- Bug fixing
- System updates

This WBS helps break the project into manageable components & ensures systematic project execution.
